

The Mini WAVE loom

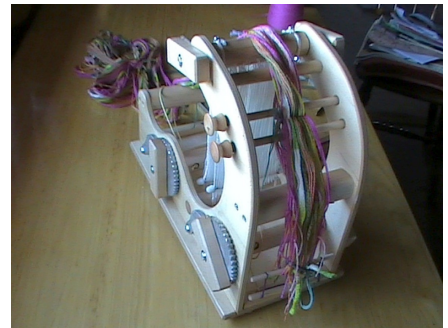

The Wave Video that comes with each loom uses the Big Wave as a model. It is best to view the video and then look at the following pictures which are specific to the Mini Wave.

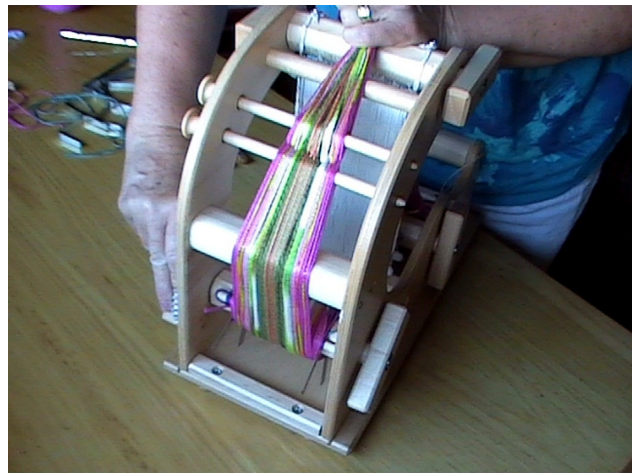

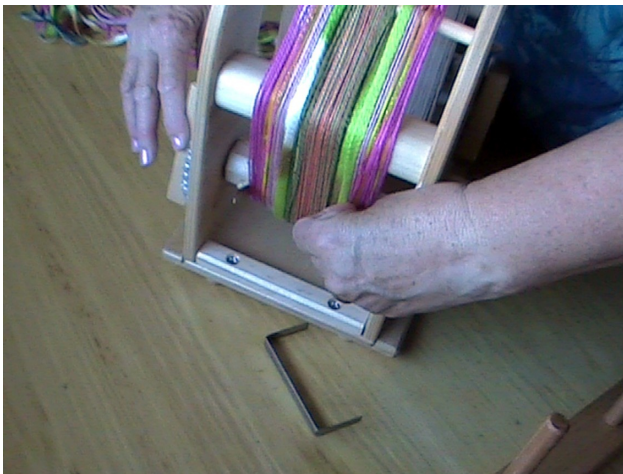

Put the Lease sticks through the "cross" you created on the warping frame.

Tie on the 2nd tie bar and put the tie bar through the loop of your warp.

Pick the set of "U" Brackets that fit the width of the warp you will be using. It is important that you place the U Brackets under the first wrap of your warp otherwise they might stick down too low and scrape the loom bottom.

To complete the setup review the DVD for tying your warp to the Cloth Beam and "Setting" your weaving start.
